### Data Visualisation with MissionOS

Operating Tunnel Boring Machines inside tunnels, or without live reference to the ground model or monitoring, is akin to driving a car with headlights off and without navigational aids. MissionOS provides a brighter set of headlights to give a clear vision of what is ahead.

Dr. Angus Maxwell, Founder & CEO of Maxwell GeoSystems shared his thoughts on the importance of having clarity and visualisation in tunnelling projects by saying, ***"It seems obvious, but an immediate way to improve tunnelling, is to allow those at the sharp-end to see in real-time what's coming, to observe the effects when mining, to investigate the controlling factors in an objective manner and feed recommendations back to the operators within each tunnelling cycle. The technology exists to do this. Let's use it."***
