### MissionOS Encourages Collaboration

#### MissionOS Serves as the Common Data Environment for your Project Data

As project data is exponentially increasing in size, it is more imperative than ever before to have a Common Data Environment (CDE) so that relationships and trends between different data sources can be identified on the fly.

The developers of MissionOS have recognised this need from the beginning, and have built the data management platform to be 100% configurable to handle all digital data created and shared during a project's lifecycle.

As a result, MissionOS is an ideal environment to promote collaboration with its data loading flexibility, data reporting, blogging, and customised reports. Active risk management is more achievable than ever before with MissionOS.

For more information on MissionOS be sure to check out our website [www.maxwellgeosystems.com](http://www.maxwellgeosystems.com) and subscribe to Follow our company profile on [LinkedIn](#) for the very latest news and developments.
