MGS on a mission in Canada

Maxwell GeoSystems has been at the forefront in creating and implementing the world's most connectable, configurable data management and integration platform for the construction and infrastructure industries.

With the construction technology sector growing, the cloud-based MissionOS platform has already been adopted on a number of projects throughout Asia-Pacific (APAC), Europe and UK, across a wide range of application areas. It is a powerful and flexible data management system for acquisition, monitoring and analysis of geotechnical and other project-related data.

Building on the achievements already made in the USA, and as a mark of continued success, the company is now embarking on new large-scale projects in Canada, with the MissionOS being the ideal product for digitalisation, to maximise productivity and minimise risks.

With the footprint of the company expanding into new regions, the aim is to help project engineers and other project stakeholders to feel the power of MissionOS, which offers high functionalities and capabilities.
