### Maxwell GeoSystems Employee Focus- Jinesh AP

Maxwell GeoSystems is involved in numerous projects around the world across a range of challenging terrains and environments. The company's success is all down to our staff, who are working with clients to ensure smooth operations take place, with the use of the MissionOS. In this post, we'll focus on our Junior Team Lead, Jinesh AP, who is currently working on the NEOM project in the Kingdom of Saudi Arabia.

Jinesh AP has been on the ground since last year, in arguably the world's biggest and largest construction project. A key element of his role has been with coordinating on delivering our MissionOS product and services with the highest technical standards and efficiency. He assists the engineering team to design analytical methods in support of construction productivity enhancements and observational engineering.

When asked to tell us about some of his major achievements during this time, he mentioned, "By helping project stakeholders with major developments by configuring construction and instrumentation related items within MissionOS. As well as receiving the 'Award for Excellence' by Maxwell GeoSystems in 2022 was a remarkable achievement for me".

Despite Jinesh's initial experience with cold weather of a new climate, new working environment and new office, he has adjusted to these changes of his surroundings well, helping project stakeholders achieve their goals and showcasing the capabilities and functionalities of the MissionOS software, and how it is a must-have for construction and infrastructure projects.
