

## Media News

### New Research and Development Centre

Maxwell GeoSystems is pleased to announce the opening of its new Research and Development office in Kochi, India.

This is another landmark moment for the company, which is continuing its expansion and paving its way being at the forefront of digitalisation of the construction and infrastructure industry. The first MGS R&D facility in India was opened in 2014, and the team recently marked its 8th year anniversary of operations.

The new R&D facility will further enhance the performance and works of the MissionOS system. The MissionOS system continues to demonstrate its reliability, robustness and resilience as a market-leading cloud-based platform for construction data management, providing essential continuation of services to clients globally, despite the extraordinary circumstances.

In today's day and age of technological advancements, the opening of this facility is timely to ensure key project stakeholders get the best possible service and improve productivity.

Despite of COVID-19 restrictions and lockdowns, various support measures were put in place to help adapt to the changing times and maintaining business continuity through hybrid working practices.
